SUMMARY

Frontend Engineer with 8 months of experience building high-performance React applications and real-time data systems. Specialized in optimizing rendering performance and handling high-frequency updates. Reduced bundle size by 81% and improved UI responsiveness in data-heavy applications. Strong focus on scalable architecture, async data handling, and performance optimization.

SKILLS

- **Core:** React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3
- **Real-time & Data:** WebSockets, React Query, REST APIs
- **Performance:** Memoization, Code Splitting, Lazy Loading, Render Optimization
- **Tools & Platform:** Git, Vite, Vercel, Netlify, GitHub Actions, Postman
- **Secondary:** Flutter

EXPERIENCE

Frontend Developer

FloorWalk Consultants Pvt. Ltd.

Aug 2025 – Present

Indore, India

- Reduced bundle size from **70MB** → **13MB (–81%)**, improving initial load performance and reducing load time from ~6s to ~4s in production.
- Built **real-time analytics dashboards using WebSockets**, handling high-frequency updates with optimized UI rendering.
- Improved interaction latency by identifying bottlenecks using Chrome DevTools & optimizing component structure.
- Reduced unnecessary re-renders using memoization and state isolation techniques in data-heavy components.
- Designed reusable component architecture, improving development speed and maintainability across modules.
- Implemented API layer with **caching and retry mechanisms**, reducing redundant network calls and improving reliability.
- Developed authentication and file upload workflows with secure API integration and error handling.
- Built multi-language UI system supporting **8+ languages**.
- Collaborated with backend teams to handle evolving APIs and ensure stable frontend integration.

PROJECTS

TrackHire — Job Tracking Platform

Preview | GitHub

(React, Supabase, Clerk Authentication)

- Built role-based job tracking platform with dynamic dashboards and state-driven UI updates.
- Implemented filtering, pagination, and status workflows to handle large datasets efficiently.
- Designed reusable component structures to support scalability and maintainability.
- Optimized data fetching and UI updates to handle large datasets with minimal performance overhead.

Code Book — Online Code Editor

Preview | GitHub

(React, Monaco Editor, Judge0, Gemini API)

- Built browser-based code editor with real-time code execution and AI-assisted debugging.
- Integrated external APIs to handle async execution workflows and failure states.
- Optimized editor performance for large inputs, ensuring smooth typing and execution experience.
- Managed complex state updates efficiently to minimize UI lag.

EDUCATION

Bachelor of Science in Information Technology

Guru Nanak Dev University

Aug 2022 – June 2025

Amritsar, India
