PROFESSIONAL SUMMARY

Software Engineer with hands-on experience building REST APIs and production web applications using Python, FastAPI, PostgreSQL, React, Next.js and TypeScript. Shipped production backend APIs for an AI report-analysis feature that lowered server costs by 25%. Skilled in API design, relational schema design with SQLAlchemy and Alembic, JWT authentication, role-based access control, caching and retries, automated testing and deployment automation. Focused on scalable, maintainable systems.

WORK EXPERIENCE

Frontend Developer - FloorWalk Consultants Pvt. Ltd., Indore, India Aug 2025 - Present

Products & Services: Floorwalk, FloorInsights, floor.estate CRM, client/ auditor/ manager/ Moderator portals, Shopper app

- Engineered and shipped production backend APIs for an AI report-analysis feature, lowering server costs by 25% with a scheduled weekly batch job that analyzes the previous week's approved reports instead of one LLM call per submission.
- Automated deployments for 8 frontend portals and 2 React Native mobile applications (iOS and Android), replacing a manual release process and cutting deployment time from about 3 hours to 30 minutes.
- Architected a reusable API layer (caching, retries, centralized error handling) and custom hooks that replaced per-component fetch logic across modules, decreasing duplicate API calls by 30%.
- Worked with backend engineers on API integration and debugging for authentication, file upload and reporting flows.
- Built and presented the frontend of a real-estate CRM (Next.js, React, TypeScript) to 10–15 internal users, collaborating with stakeholders to implement role-based access control for leads, properties and dashboards.
- Implemented WebSocket-driven dashboards that push report updates, analytics and notification counts without page refresh, curtailing dashboard render times by 100ms using useMemo and useCallback.
- Reduced the production build size by approximately 81% (70 MB to 13 MB) by removing unused libraries and dead code, compressing images and adding lazy loading; practical load time improved from 6–8s to 3–4s.
- Redesigned the client portal and Shopper app; developed features across the auditor and manager portals and the company websites (floorwalk.in, nps.floorwalk.in); shipped multilingual apps (8+ languages).
- Converted Figma designs into reusable UI shared across 5+ modules and portals; profiled and fixed rendering bottlenecks.

SKILLS

Languages: Python, TypeScript, JavaScript (ES6+), SQL, HTML5, CSS3

Backend & APIs: FastAPI, REST API Design, SQLAlchemy 2.0, Pydantic v2, PostgreSQL, Alembic, JWT Authentication, Role-Based Access Control

Frontend: React.js, Next.js (App Router), Redux, TanStack Query, Tailwind CSS, shadcn/ui, Responsive Design

Testing & Tools: Pytest, React Testing Library, Git, GitHub, Postman, Chrome DevTools

Deployment & DevOps: Docker, Vercel, Railway, Supabase, cPanel / WHM, Apple Developer Account, Google Play Console

EDUCATION

Guru Nanak Dev University Aug 2022 - Jul 2025
B.Sc., Information Technology Amritsar, India

PERSONAL PROJECTS

LLM Reliability Lab GitHub

- Built an LLM evaluation platform with FastAPI and Next.js featuring semantic caching, benchmark execution, experiment history and dashboards.
- Implemented deterministic LLM-as-a-judge evaluation workflows and bias diagnostics to analyze model output quality and consistency. Developed a RAG prompt-injection testing harness, provider timeout handling, authentication and automated backend tests.

TrackHire Link

- Designed a REST API with FastAPI and Pydantic v2 covering job applications, companies, interviews, resumes and activity tracking, backed by a normalized PostgreSQL schema (SQLAlchemy 2.0, Alembic migrations).
- Implemented JWT authentication with protected routes using FastAPI dependency injection, alleviating API latency by 25%; tested the API with Pytest and the UI with React Testing Library.
- Engineered the frontend with search, filtering, pagination and role-based UI using shadcn/ui, curtailing redundant API calls by 30%.
